

# CONTENTS

<b>Preface</b>	. . .	<b>10</b>
<b>Introduction</b>	. . .	<b>12</b>
<b>PART I. EXACT REASONING</b>	. . .	<b>21</b>
<b>CHAPTER 1. Automatic Theorem Proving</b>	. . .	<b>21</b>
1.7. Normal and Standard Forms	. . .	22
1.8. Logical Consequences	. . .	29
1.9. Herbrand's Inference Procedure	. . .	30
1.10. Resolution Principle	. . .	33
1.11. Linear Resolution	. . .	38
1.12. Inference in the Prolog Language	. . .	43
1.6.1. SLD – resolution	. . .	43
1.6.2. Strategies of Search in the Prolog Language	. . .	47
1.6.3. Closed World Assumption	. . .	49
1.6.4. Syntax and Semantics of the Prolog Language	. . .	50
1.6.5. Implementation of Knowledge Representation Models and Inference in the Prolog Language	. . .	56
1.6.5.1. Implementation of Production Inference	. . .	56
1.6.5.1.1. Implementation of Planning Algorithms	. . .	56
1.6.5.1.2. Application of the Prolog Language for Solving the Puzzles	. . .	58
1.6.5.2. Implementation of Inference on Semantic Networks	. . .	62
1.6.5.3. Implementation of Inference on Frame Structures	. . .	64
<b>CHAPTER 2. Inference on Connection Graphs</b>	. . .	<b>66</b>
2.1. The Sequential Proof Procedure by the Connection Graph Method	. . .	66
2.2. Search Strategies in a Connection Graph	. . .	70
2.3. Advantages of the Inference Procedure on a Connection Graph.	. . .	72
2.4. Parallel Inference on Connection Graphs	. . .	73
2.4.1. The Method of OR-parallel Resolution	. . .	73
2.4.2. DCDP – Parallel Inference	. . .	74
2.4.3. AND – Parallel Resolution	. . .	77
2.5. Modification of Parallel Inference Procedures	. . .	79
2.5.1. Principles of Creating the Heuristic Functions	. . .	79
2.5.2. The Heuristic Function H1	. . .	81
2.5.2.1. Computing a Heuristic Assessment of a Clause	. . .	81
2.5.2.2. Computing a Heuristic Assessment of an Unifier	. . .	81
2.5.2.3. Computing a Heuristic Assessment of a Predicate Literal	. . .	82
2.5.2.4. Choice of Coefficients	. . .	82
2.5.3. Application of the Heuristic Function H1 at Solving the Steamroller Problem	. . .	82
2.6. Comparison of the Efficiency	. . .	85
2.7. The Parallel Inference System (PIS) for a Connection Graph	. . .	89
2.7.1. Automatic Choice of Parallel Inference Methods	. . .	89
2.7.2. Mathematical Preprocessor	. . .	90
2.7.3. Acceleration Methods and Result Analysis for the	. . .	

N-queens Problem	. . .	. 92
2.7.4. Obtained Results	. . .	. 94
<b>CHAPTER 3. Inference on Clause Graphs</b>	. . .	<b>. 95</b>
<b>3.1 Types of Parallelism in Deductive Inference</b>	. . .	<b>. 95</b>
<b>3.2. The Sequential Inference Algorithm in Color Clause Graphs</b>	. . .	<b>. 97</b>
<b>3.3. Parallelism in Deductive Inference on C-Graphs</b>	. . .	<b>. 101</b>
<b>3.4. The Efficiency Comparison of Deductive Inference Procedures</b>	. . .	<b>. 109</b>
<b>CHAPTER 4. Inference on Analytic Tableaux</b>	. . .	<b>. 112</b>
<b>4.1. The Method of Analytic Tableaux for Propositional Logic</b>	. . .	<b>. 112</b>
<b>4.2. The Method of Analytic Tableaux for First-Order Predicate Logic</b>	. . .	<b>. 117</b>
<b>4.3. The Method of Analytic Tableaux in Logic Programming</b>	. . .	<b>. 126</b>
4.3.1. Implementation of the Method of Analytic Tableaux for Propositional Logic in Prolog	. . .	. 126
4.3.2. Implementation of the Method of Analytic Tableaux for First-Order Predicate Logic	. . .	. 130
4.3.2.1. Unification Algorithm	. . .	. 130
4.3.2.2. Analytic Tableaux with Free Variables	. . .	. 133
4.3.2.3. Implementation of the Unification Algorithm in Prolog	. . .	. 138
4.3.2.4. Implementation of the Method of Analytic Tableaux for First-Order Logic in Prolog	. . .	. 140
<b>CHAPTER 5. Inference in Hierarchical Structures</b>	. . .	<b>. 149</b>
<b>5.1. Multi-level Order-Sorted Algebra</b>	. . .	<b>. 149</b>
5.1.1. The Necessity of Designing the Inference Engines in Hierarchical Structures	. . .	. 149
5.1.2. Introduction in Multi-level Algebra	. . .	. 150
5.1.3. Simulating the Subtypes and Inheritance	. . .	. 151
5.1.4. Describing Parametric Polymorphism by the Apparatus of Two-level Algebra	. . .	. 152
<b>5.2. Multi-layer Logic as a Knowledge Representation Language in Intelligent Systems</b>	. . .	<b>. 155</b>
5.2.1. The Ways of Setting up the Hierarchical Structures in Multi-layer Logic	. . .	. 155
5.2.2. Syntax of Multi-layer Logic	. . .	. 160
5.2.3. Describing Two Types of Hierarchical Abstraction and Hierarchical Structure by a Set of Well-formed Formulas of Multi-layer Logic	. . .	. 161
5.2.4. Logic Inference in Multi-layer Logic	. . .	. 165
5.2.4.1. Scolemization Algorithm	. . .	. 165
5.2.4.2. Unification Algorithm	. . .	. 167
5.2.4.3. Peculiarities of Using Input Resolution in Multi-layer Logic	. . .	. 169
5.2.4.4. Hierarchical Abstraction and Production Model	. . .	. 174
<b>5.3. The System of Simulating a Problem Domain (Knowledge Model - KM)</b>	. . .	<b>. 175</b>
5.3.1. Assignment and the Structure of the KM System	. . .	. 175
5.3.2. The Conceptual Language of Describing a Complex Structured Problem Domain	. . .	. 180
5.3.3. Implementation of the KM System	. . .	. 181

<b>PART II. ARGUMENTATION AND ABDUCTION</b>	<b>. 184</b>
<b>CHAPTER 6. Data and Knowledge in Intelligent Systems</b>	<b>. 184</b>
6.1. Peculiarities of Knowledge	. 184
6.2. Knowledge as a Justified True Belief	. 191
6.3. Non-Factors of Knowledge	. 196
6.4. Why the Nontraditional Logics Need?	. 202
<b>CHAPTER 7. Monotonic Classic Modal Logics</b>	<b>. 207</b>
7.1. First-order Predicate Calculus as a Base of Building Modal Logic	. 207
7.2. Auxiliary Logic as a Base of Transferring to Modal Propositional Calculus	. 208
7.3. Postulates, Main Theorems and Rules of Modal Propositional Calculus	. 210
7.4. S1 System	. 212
7.5. S4 System	. 219
7.6. S5 System	. 222
7.7. Semantics of Cripke's Possible Worlds	. 223
<b>CHAPTER 8. Non-Monotonic Modal Logics</b>	<b>. 227</b>
8.1. Belief and Knowledge Logics	. 227
8.2. McDermott's Non-Monotonic Logics	. 231
8.3. Autoepistemic Logics	. 235
8.4. Default Logics	. 241
8.5. Truth Maintenance Systems	. 250
8.5.1. Justification-Based Truth Maintenance Systems	. 252
8.5.2. Assumption-Based Truth Maintenance Systems	. 254
<b>Глава 1. CHAPTER 9. Non-Monotonic Logics in Logic Programming</b>	<b>. 257</b>
9.1. Semantics of Logic Programs: overview	. 258
9.1.1. Normal Logic Programs	. 258
9.1.1.1. The Language of Normal Logic Programs	. 258
9.1.1.2. Semantics	. 260
9.1.1.2.1. Stable Model Semantics	. 262
9.1.1.2.2. Well-founded Semantics	. 263
9.1.2. Extended Logic Programs	. 265
9.1.2.1. Describing the Language	. 266
9.1.2.2. Semantics	. 266
9.1.2.2.1. Stable Model Based Semantics	. 266
9.1.2.2.2. Well-founded Based Semantics	. 268
9.1.2.2.3. Other approaches	. 269
9.1.3. Why a New Semantics for Extended Programs Need?	. 269
<b>9.2. WFSX – a Well-Founded Semantics for Extended Logic programs</b>	<b>. 270</b>
9.2.1. Interpretations and Models	. 270
9.2.2. The Definition of WFSX	. 272
9.2.3. Existence of the Semantics	. 275
9.2.4. Top-Down Derivation Procedures for WFSX	. 277
9.2.4.1. WFSX Characterization by Means of Semantic Trees	. 277
9.2.4.2. SLX – a Derivation Procedure for WFSX	. 281
9.2.4.3. On Reaching the Halt of SLX – procedure	. 282
<b>9.4. Operation with Inconsistency</b>	<b>. 285</b>
9.3.1. Deleting Inconsistency	. 287

9.3.2. Paraconsistent WFSX	. . .	. 288
9.3.3. Declarative Revisions	. . .	. 291
9.3.4. Supporting and Deleting Inconsistency	. . .	. 296
<b>9.5. WFSX, Semantics of Logic Programs with Two Negations And Autoepistemic Logic</b>	. . .	<b>. 300</b>
9.4.1. Generic Semantics for Programs with Two Kinds of Negation	. . .	. 301
9.4.1.1. Properties of $\neg$ -negation	. . .	. 306
9.4.1.2. Fixing the Set $AX\neg$ and the Condition $\text{not}_{\text{cond}}(L)$	. . .	. 308
9.4.1.3. Logic Programs with $\neg$ -Negation and Disjunction	. . .	. 310
9.4.2. Autoepistemic Logics for WFSX	. . .	. 311
9.4.2.1. Moore's and Przymusiński's Autoepistemic Logics	. . .	. 312
9.4.2.2. A Logic of Belief and Provability	. . .	. 314
9.4.2.3. Further Developments	. . .	. 320
<b>9.5. WFSX and Default Logic</b>	. . .	<b>. 320</b>
9.5.1. The Language of Defaults	. . .	. 321
9.5.1.1. Reiter's Default Semantics	. . .	. 322
9.5.1.2. Well-founded and Stationary Default Semantics for Normal Logic Programs	. . .	. 323
9.5.2. Some Necessary Principles for the Default Theory	. . .	. 324
9.5.3. $\Omega$ -Default Theory	. . .	. 327
9.5.4. Comparison with Reiter's Semantics	. . .	. 331
9.5.5. Comparison with Stationary Default Semantics	. . .	. 331
9.5.6. Link of Semantics of Default Theory and Logic Programs with Explicit Negation	. . .	. 332
9.5.7. The Definition of WFSX Based on $\Gamma$	. . .	. 333
<b>CHAPTER 10. Argumentation Systems and Abductive Reasoning</b>	. . .	<b>. 336</b>
<b>10.1. Defeasible Argumentation Systems</b>	. . .	<b>. 336</b>
10.1.1. Foundations of Argumentation Theory	. . .	. 336
10.1.1.1. Main Properties of Semantics Based on Arguments	. . .	. 339
10.1.1.2. Assignment of Unique Status to an Argument	. . .	. 340
10.1.1.3. Assignment of Multiple Status to Arguments	. . .	. 346
10.1.1.4. Comparison of Approaches of Unique and Multiple Status Assignment to Arguments	. . .	. 348
10.1.2. Overview of Argumentation Systems	. . .	. 349
<b>10.2. Organization of Abductive Inference</b>	. . .	<b>. 354</b>
10.2.4. Notion of Abductive Inference	. . .	. 354
10.2.5. Approaches to Abduction Characterization	. . .	. 357
10.2.2.1. Approaches Based on Set Covering	. . .	. 357
10.2.2.2. Approaches Based on Logic	. . .	. 358
10.2.2.3. An Approach on a Knowledge Level	. . .	. 361
10.2.6. Approaches to Computing Abductive Explanations	. . .	. 363
10.2.3.1. Approaches to Hypotheses Generation	. . .	. 363
10.2.3.2. Approaches to Hypotheses Choice	. . .	. 367
10.2.7. The Method of Probabilistic Abductive Reasoning in Complex Structured Problem Domains	. . .	. 371
10.2.4.1. Basic Definitions	. . .	. 371
10.2.4.2. Description of the The Method of Probabilistic Abductive Reasoning in Complex Structured Problem Domains	. . .	. 373
10.2.4.3. Algorithms of Probabilistic Abductive Reasoning in Complex Structured Problem Domains	. . .	. 375

10.2.4.4. The Checking Procedure of Founded Explanations on Consistence	. . .	. 377
10.2.4.5. Examples of Applying the Designed Algorithms of Abductive Inference in Complex Structured Problem Domains	. . .	. 378
<b>10.3. Abduction and Argumentation in Logic Programming</b>	. . .	<b>. 383</b>
10.3.1. Argumentation Semantics of Logic Programs and Its Computation	. . .	. 383
10.3.1.1. Preferable Expansions and Semantics of Admissibility	. . .	. 384
10.3.1.2. Stable Theories and Semantics of Weak Stability	. . .	. 385
10.3.1.3. Semantics of Acceptability	. . .	. 386
10.3.1.4. Semantics of Well-Founded Models	. . .	. 387
10.3.1.5. The Proof Procedure for Argumentation Semantics	. . .	. 389
10.3.3. The Role of Argumentation in Organization of Abductive Inference	. . .	. 394
 <b>PART III. INDUCTION AND GENERALIZATION</b>	. . .	<b>. 400</b>
 <b>CHAPTER 11. Basic Principles of Building Learning and Decision-Making Systems</b>	. . .	<b>. 400</b>
11.1. Decision Support Systems	. . .	. 402
11.2. Problems of Knowledge Extraction from Databases	. . .	. 405
11.3. The Ways of Original Information Representation in Intelligent Systems	. . .	. 410
11.4. Structure-Logic Generalization Methods	. . .	. 414
<b>CHAPTER 12. The Problem of Learning a Teacher Free</b>	. . .	<b>. 422</b>
12.1. The Algorithm Based on the Notion of a Threshold Distance	. . .	. 422
12.2. MAXMIN Algorithm	. . .	. 425
12.3. The «K middle» Algorithm	. . .	. 427
12.4. Recognition with Using the Decision Functions	. . .	. 430
12.4.1. Building Decision Functions on a Criterion of a Minimal Distance	. . .	. 430
12.4.2. Dividing Decision Functions	. . .	. 431
12.4.3. Linear Decision Functions	. . .	. 433
12.4.4. Building a Decision Function by the Potential Method	. . .	. 436
12.5. Recognition Based on Rough Features	. . .	. 439
<b>CHAPTER 13. Learning with a Teacher</b>	. . .	<b>. 441</b>
13.1. Setting up the Problem	. . .	. 441
13.2. The DREV Algorithm	. . .	. 445
13.3. Building a Decision Tree with Using Hamming's Metrics	. . .	. 447
13.4. Induction of Decision Trees	. . .	. 449
13.5. Modification of the Quinlan's Algorithm – ID5R	. . .	. 453
13.6. The Reduce Algorithm	. . .	. 458
13.7. Focusing	. . .	. 461
13.8. The EG2 Algorithm	. . .	. 466
<b>CHAPTER 14. Inductive Methods for the Case of Incomplete Information</b>	. . .	<b>. 472</b>
14.1. Problems of Knowledge Extraction from Databases	. . .	. 472
14.1.1. Limited Information	. . .	. 472
14.1.2. Distorted Information	. . .	. 473
14.1.3. The Large Volume of Databases	. . .	. 473

14.1.4. Changing Databases at Time	. 474
<b>14.2. The Algorithm of Extracting Production Rules from a Large Database</b>	<b>. 474</b>
<b>14.3. Approach with Using Rough Sets</b>	<b>. 477</b>
14.3.1. Basic Notions of the Rough Set Theory	. 478
14.3.2. The RS1 Algorithm Using Rough Sets	. 481
14.3.3. Information Systems with uncertainty	. 484
<b>14.4. The Algorithm of Object Recognition in Conditions of Incomplete Information</b>	<b>. 492</b>
<b>BIBLIOGRAPHY</b>	<b>. 501</b>
